Network Infrastructure

Get Connected and Stay Connected!

• Router Configuration and Maintenance

SCVData can help you keep up with the ever-growing demand for better network technology and security. From Virtual Private Networks, to Firewalls, to Access Control and more, we will make your secure as well as fast!

• RSA and Verisign Multi-Factor Authentication Implementations

Using the most advanced encryption available, SCVData will keep your communications from being observable by those seeking to obtain your organization's personal and confidential information.
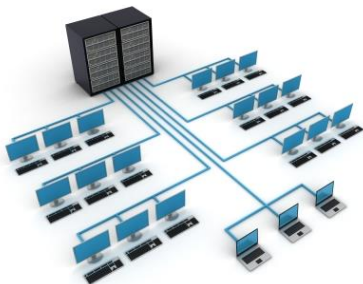

• Infrastructure, Technology and Security Assessments

Not sure where to start? SCVData will make a detailed analysis of the core hardware, software, and application integration systems currently utilized at your organization. We will also work with you to ensure that your organization is operating at its full potential.

• Advanced Network Switching and Routing

Switches and Routers are the building blocks for all business communications, from data to voice and video to wireless access. They can improve profitability by enabling your organization to increase productivity by speeding up data transfers, increasing communication quality, improving security and more!

• Server Virtualization and Consolidation

We can simplify your IT infrastructure, save on energy costs, improve disaster recovery, increase uptime, speed up performance, and much, much more by virtualizing your physical servers into virtual machines.
