Mobile Device Integration

Keeping you connected to your business - no matter where you are.

(661) 600-5333

In both the public and private sectors, workers are increasingly creating and sharing information with mobile devices, including smartphones and tablets. It is not uncommon to see employees using these devices to accomplish work for their employers. While this is increasing productivity, without the right protections in place, it can also introduce cyber security threats.

• Lock Screens, Encryption and Remote Security Features

Have you ever considered what could happen if your mobile device was misplaced or stolen?

We can help you configure your device so that you can find it from any browser, or any other smartphone and pinpoint its location within a few feet.

We can also help you make backups of your device's data, and securely encrypt the data on your device - so that if you lose it, you will not only be confident that your data is safe, but will be able to delete your crucial data remotely.
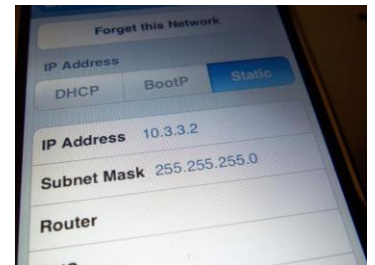

• Secure Email (POP3 / IMAP / Exchange)

We can help you configure your mobile device with email encryption. When you send important information from your device, be confident that it's not falling into the wrong hands!

• Secure and Anonymous Browsing

With an encrypted "Proxy Server" (a secure gateway to the internet) enabled on your mobile device, you'll be able to connect to the internet on any Wi-Fi connection, without the risk of your data, location, and accessed-websites being viewed by anyone, including the Wi-Fi provider!

• Take Office Calls on Your Phone with SIP

SIP (Session Initiation Protocol) allows you to transform your smart phone into an office phone. You will be able to take calls remotely - as if you're at the office, using the same number and features that you have on your office phone!

• There Should Be an App for That

As technology evolves, companies are realizing the benefits of using mobile apps to increase productivity and functionality within their business - from Quoting, to Product and Service Information, to Communication. Improve your business presence with an app!
