# Network Cabling

*knowledgeable in the latest technology advancements and services.*

## • Quality

Is there really anything more important for your office or company than your communications to and with the world and your clients?

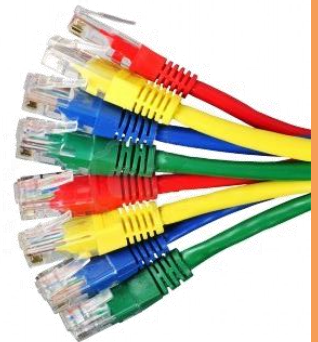

## • Dependability

Cable systems now must support and integrate voice, data, video, security, distributed sound, wireless technology and environmental controls. Proper network cabling done to industry standards can save organizations literally thousands of dollars in costs a year.

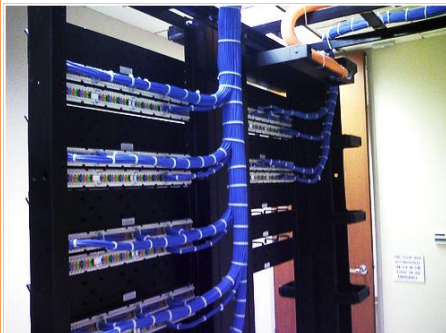

## • Flexibility

From fiber optic to category 6 to category 5e to the desktop, SCVData will get you connected quickly and properly.

## • Saving Time = Saving Money

Whenever your office has a network issue, the necessity of being able to quickly locate the problem cannot be overstated. Having a clean, well organized, well labeled network with properly designed throughput can make the difference between minutes and hours to identify, locate, and solve network issues. When time is money, and nothing is more essential than your company's data infrastructure.

**You want your network to look like this**

**Not like this**
