Backup Solutions

Ensure that the data you rely on most is always there, and safe - even if your hard drive crashes

• Determine What Backup Solution is Right for You

As your trusted Technology Consultant, SCVData will help you determine which Backup Solution is right for you.

• Customize Your Backup

With SCVData's Backup Solutions, you can customize your backup. Choose what you would like to back up, and how often you'd like the backup to run (daily, weekly, monthly .etc)

• Backup Faster

While many backup services will create complete backups of your files every time you back up, SCVData's backup system only copies the files that have been updated since the last backup - saving you time and space.

• Encrypt Your Backup

Worried about your data falling into the wrong hands?
We use the most advanced encryption algorithms to ensure that your backed up data will be completely unreadable if it falls into the wrong hands.

• Is Your Backup Reliable?

SCVData has implemented advanced testing and logging features to ensure that when the day comes when data must be restored, it will be a perfect copy of the original.
